Class summary

This is what the reports you opened here say about the class, worked out in this page and nowhere else: nothing is sent and nothing is kept. It has no names, roster ids or file names. Each report counts once and an exact duplicate not at all. It never changes a mark, a score or a gradebook file, and it describes the reports in front of you; it is not a study of learning.

14 reports counted on 2026-10-21; 0 exact duplicates left out; 0 of the reports are repeated attempts, and each attempt counts.

Kepler's Laws: 10 reports

How far they got: the middle report visited 30% of the steps, and the reports range from 30% to 30%.

Step	Answered	Right, of the answers Gravitas can check	Written answers marked	Mean mark
Where is the star?	10 of 10	70% (7/10)	-	-
What sits at the other focus?	0 of 10	-	-	-
Measure the two orbits	0 of 10	-	-	-
Where does it move fastest?	0 of 10	-	-	-
Fast and slow, in numbers	0 of 10	-	-	-
Why the speed changes	6 of 10	-	0 of 6	-
Measure four planets	0 of 10	-	-	-
Work the law out, step by step	0 of 10	-	-	-
Use the law	10 of 10	60% (6/10)	-	-
What the constant depends on	0 of 10	-	-	-
Weigh TRAPPIST-1 yourself	0 of 10	-	-	-
Weighing another star	0 of 10	-	-	-
Where Kepler's version breaks	0 of 10	-	-	-

Most frequent wrong answers

Question	Answer given	Count	Share of the wrong answers to that question	Misconception the author named
Where is the star?	A: the center of the ellipse	2	67%	none named
Where is the star?	C: the closest point of the orbit	1	33%	none named
Use the law	64 years	3	75%	That is a^3. The law says $P^2 = a^3$, so the period is the square root of 64, not 64 itself.
Use the law	5 years	1	25%	none named

Only answers Gravitas can check appear here. A mistake is named only where the investigation's author wrote it down, in the investigation's own English words; every other wrong answer is shown as given and not explained.

Time the reports record

From 10 reports that record both times: the middle is 43 min, the middle half runs from 39 min to 51 min, and the range is 27 min to 1.6 h.

Time	Reports
under 15 min	0
15 min to 30 min	1
30 min to 1 h	7
1 h to 3 h	2
3 h to 24 h	0
more than a day	0

This is the span from the first opening to the last save a report records. It includes every hour away and says nothing about time spent working.

Bound, Unbound and Escape: 4 reports

How far they got: the middle report visited 29% of the steps, and the reports range from 29% to 29%.

Step	Answered	Right, of the answers Gravitas can check	Written answers marked	Mean mark
Load it lightly	0 of 4	-	-	-
Load it heavily	0 of 4	-	-	-
Write down the speed you found	0 of 4	-	-	-
Where is the line?	0 of 4	-	-	-
Reading the sign	0 of 4	-	-	-
What stays put	0 of 4	-	-	-
A common misunderstanding	0 of 4	-	-	-
Somewhere else entirely	0 of 4	-	-	-
Starting further out	0 of 4	-	-	-
Will it be back?	4 of 4	-	0 of 4	-

Rubric criteria, by what each claims

Criterion	Claims	Step	Marked	Mean mark
Reaches the right answer	correctness	Will it be back?	4 of 4	50%
Uses what was measured	reasoning	Will it be back?	4 of 4	50%

Claims	Marks	Mean mark
correctness	4	50%
reasoning	4	50%

Each mark is your own reading, taken as a share of the points the criterion could earn. A criterion's mark is never added to a step's mark or to a gradebook score.

Most frequent wrong answers

No wrong answers among the answers Gravitas can check.

Time the reports record

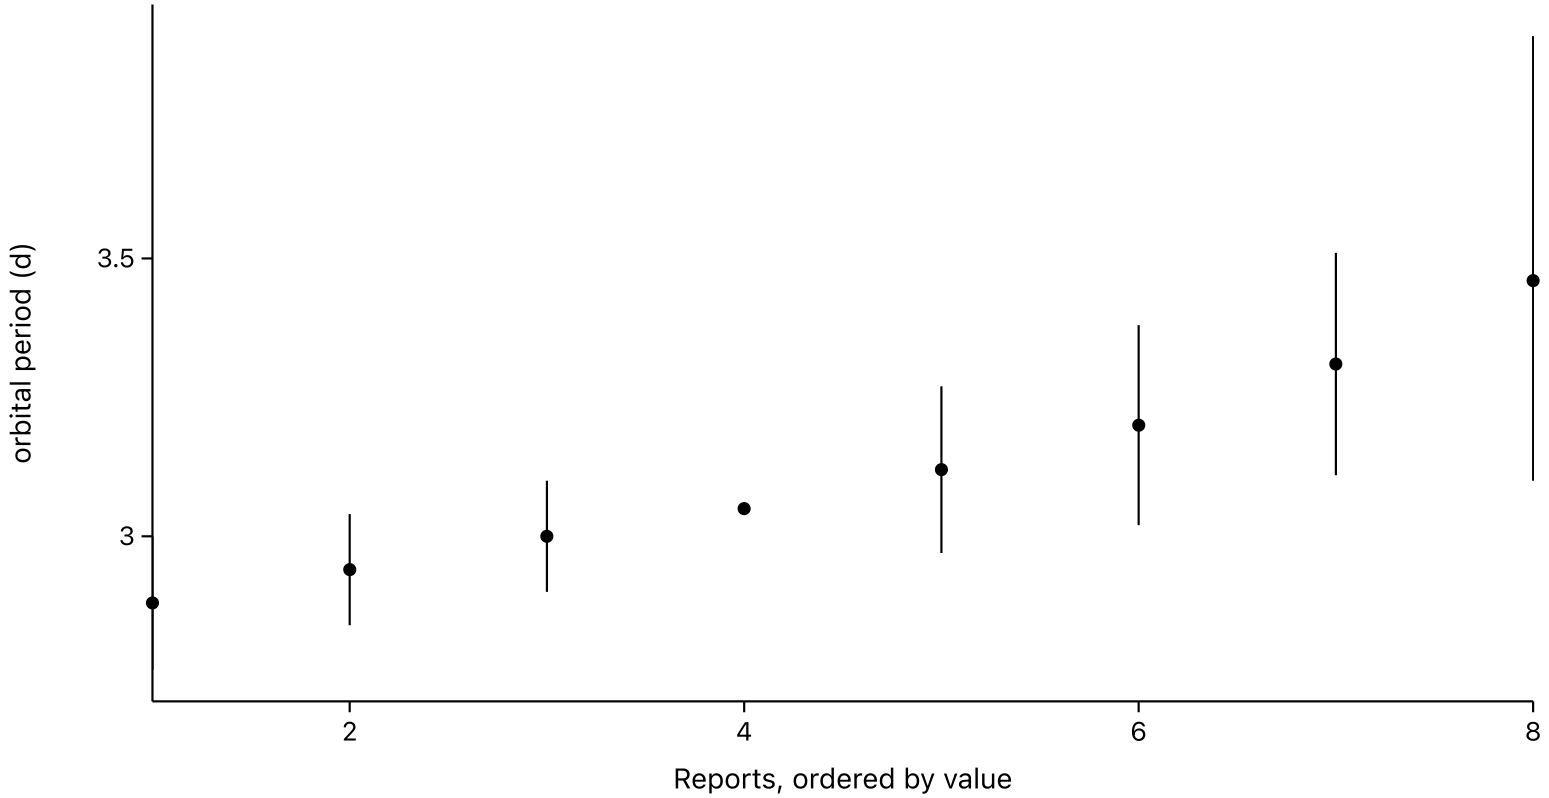

From 4 reports that record both times: the middle is 49 min, the middle half runs from 42 min to 55 min, and the range is 35 min to 62 min.

Time	Reports
under 15 min	0
15 min to 30 min	0
30 min to 1 h	3
1 h to 3 h	1
3 h to 24 h	0
more than a day	0

This is the span from the first opening to the last save a report records. It includes every hour away and says nothing about time spent working.

Measured quantities

orbital period (d): Kepler's Laws

8 values: median 3.085, range 2.88 to 3.46. 7 state an uncertainty (mean 0.141667). Left out of the plot: limits 1, failed fits 1, not constrained 0.

Rank	Value	Stated uncertainty	Origin
1	2.88	± 0.12 (data)	measured
2	2.94	± 0.1 (data)	measured
3	3	± 0.1 (data)	measured
4	3.05	-	measured
5	3.12	± 0.15 (data)	measured
6	3.2	± 0.18 (data)	measured
7	3.31	± 0.2 (data)	measured
8	3.46	+0.44 −0.36 (profile)	measured

A report states a value for a quantity once. The spread here is the spread of the class's reports, with each report's own uncertainty beside it; Gravitas does not combine them into one number.
